

Colour tokens

One warm brand hue, a warm-leaning neutral ramp and four semantic colours. Token names are identical in light and dark — only the values swap. Saturated colour is reserved for status badges and primary actions; every other surface is neutral.

Brand ramp — burnt orange-red, --brand-600 is the action colour

Neutral ramp — warm-leaning grey, saturation below 0.02

Semantic colours — each with subtle / border / text variants for badges and banners

success

📅 Preparing

Surface & text roles — same names, both themes

LIGHT

--bg-base	n-50
--surface	n-0
--surface-raised	n-100
--surface-sunken	n-200
--border	n-200
--border-strong	n-300
--text	n-900
--text-muted	n-600
--accent	brand-600
--accent-on	n-0

DARK

--bg-base	n-950
--surface	n-900
--surface-raised	n-800
--surface-sunken	n-950
--border	#3A3835
--border-strong	#55534E
--text	n-100
--text-muted	n-400
--accent	brand-400
--accent-on	#2A1008

Radii

Controls md, cards lg, sheets xl top only, badges and avatars full.

Shadows

Dark theme keeps the same offsets at higher alpha and adds a 1px --border hairline, since shadow alone is invisible on near-black.

Z-layers

page, content, table header, bottom, nav, select, menu, scrim, dialog, sheet, above, everything

Spacing scale

4 8 12 16 20 24 32 40 48 64 — a 4px base, no half-steps.

The blocks — styles/tokens.css, imported once before Tailwind

```

toggling per component, no second stylesheet. */
```

Typography & density

Plus Jakarta Sans throughout, at two densities. One codebase, two body sizes: **compact 13px** carries back-office tables, **comfortable 16px** carries customer and driver content. Density is an attribute on the shell, not a per-component prop.

FAMILY

Plus Jakarta Sans

Humanist geometric: rounder than Inter, with a tall x-height that survives 13px table rows and a distinctive **a**, **g** and **1** that keep 400/500/600/700/800 telling each other apart at small sizes.

Fallback stack: 'Plus Jakarta Sans', ui-sans-serif, system-ui, sans-serif

Regular 400 Medium 500 Semibold 600 Bold 700

Extrabold 800

NUMERALS

Every price, quantity, order id and countdown sets `font-variant-numeric: tabular-nums` so digits hold their column when a value ticks. Proportional figures stay on prose only.

PROPORTIONAL — wobbles

1180,00

999,90

1 011,10

TABULAR — aligns

1 180,00

999,90

1 011,10

The scale — one ramp, two body defaults

TOKEN	SIZE	LINE	WEIGHT	SAMPLE
display	32px	38px	800	Order #10482
h1	24px	30px	700	Restaurants near you
h2	20px	26px	700	Today’s deliveries
h3	17px	24px	600	Pizza Margherita
body-comfortable	16px	24px	400	Hand-stretched dough, San Marzano tomato, fior di latte.
body	15px	22px	400	Default paragraph size on shared screens.
body-compact	13px	18px	400	Back-office table cells, filter bars, side panels.
label	13px	18px	600	Delivery address
caption	12px	16px	400	Ring the bell, second floor — muted is n-600, never n-400.
overline	11px	14px	700	ASSIGNED TO DRIVER

Tabular numerals at work — price column

ITEM	QTY	TOTAL
Pizza Margherita	2	1 180,00
Caesar salad	1	690,00
Sparkling water 0,5l	3	297,00
Delivery	—	249,00
Total		2 416,00

Right-aligned, tabular, currency suffix outside the number so the digits align across rows regardless of symbol width.

Tabular numerals at work — countdown

ARRIVES IN

18:04

Driver 2,1 km away

OVERDUE BY

07:12

Kitchen has not confirmed

A countdown re-renders every second: without tabular figures the whole block jitters sideways on each tick. The colon stays fixed width too.

```
.num { font-variant-numeric: tabular-nums; }  
<span class="num"></span>
```

The two density rules

Customer & driver

data-density="comfortable"

Body 16/24. Every interactive target at least **44×44 px**, primary action **56 px tall, full width**, pinned in the thumb zone above the bottom nav.

44 × 44

Minimum tap target, with 8 px between neighbouring targets.

Place order 2 416,00

Back office

data-density="compact"

Body 13/18. Rows **36 px** tall with 12 px horizontal padding; controls 32 px. Pointer-only, so the 44 px floor does not apply — but focus rings and hit areas still cover the whole row.

ORDER	RESTAURANT	STATUS	DRIVER	TOTAL
#10482	Trattoria Nono	Preparing	M. Ilić	2 416,00
#10481	Burger Station	Delivered	S. Petrović	1 090,00
#10480	Green Bowl	Late	Unassigned	3 240,00

Buttons

Four variants x three sizes x six states. Only **primary** and **danger** carry saturated fill; secondary and ghost stay neutral so a screen never shows two competing actions. One primary per screen or per dialog.

Focus is always visible

A 2 px ring in `--focus-ring` with a 2 px offset in the surface colour, drawn with `box-shadow` so it clears the border and never shifts layout. Never `outline: none` without a replacement; `:focus-visible`, so a pointer click does not ring.

Loading keeps its width

The label stays in the DOM at `visibility: hidden` and the spinner is absolutely centred, so the button does not resize and the row below does not jump. The button is disabled and `aria-busy="true"` while it spins.

Sizes by role

lg 56 is the phone primary, full width in the thumb zone. **md 40** is the default everywhere. **sm 32** is back-office only — pointer input, so it may drop under the 44 px touch floor. An icon-only button is square at its size and carries an `aria-label`.

Inputs

Every field is a real `<label for>` plus a real control — never a styled `div`. Controls are 44 px tall at comfortable density, 32 px in the back office. Hint text is always present in the layout so an error does not push the form down when it appears.

Errors appear only after touch

A control validates on `blur`, not on `keystroke`. Until the user has left the field, the form shows no red — a half-typed phone number is not an error yet. In Angular terms: show the message when `control.invalid && (control.touched || form.submitted)`.

Surfaces

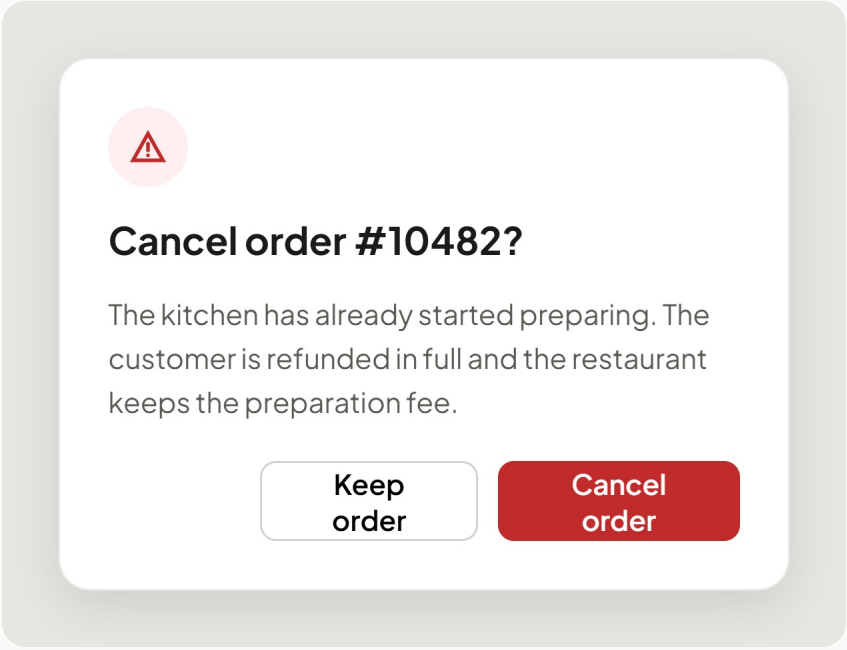

Containers are neutral: `--surface` with a `1px --border` and, where elevation is real, one shadow step. No tinted card backgrounds, no accent left-borders. The mobile equivalent of a dialog is a bottom sheet — the same component with a different presentation.

Card

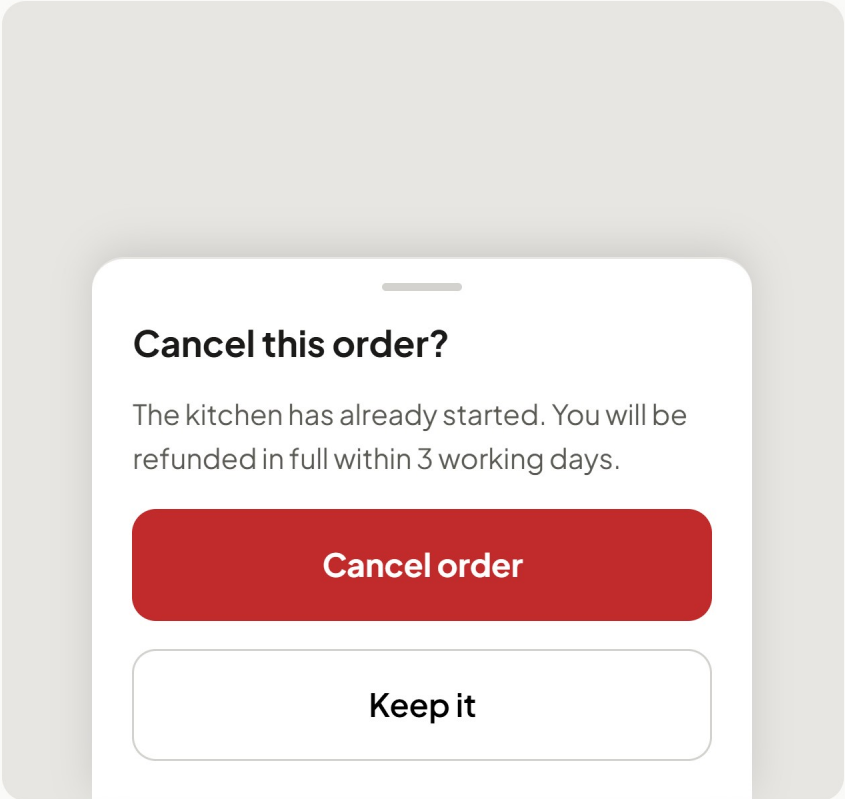

The whole card is not a link — the title and the action are. That keeps text selectable and gives the screen reader one target per destination.

Modal — confirm dialog

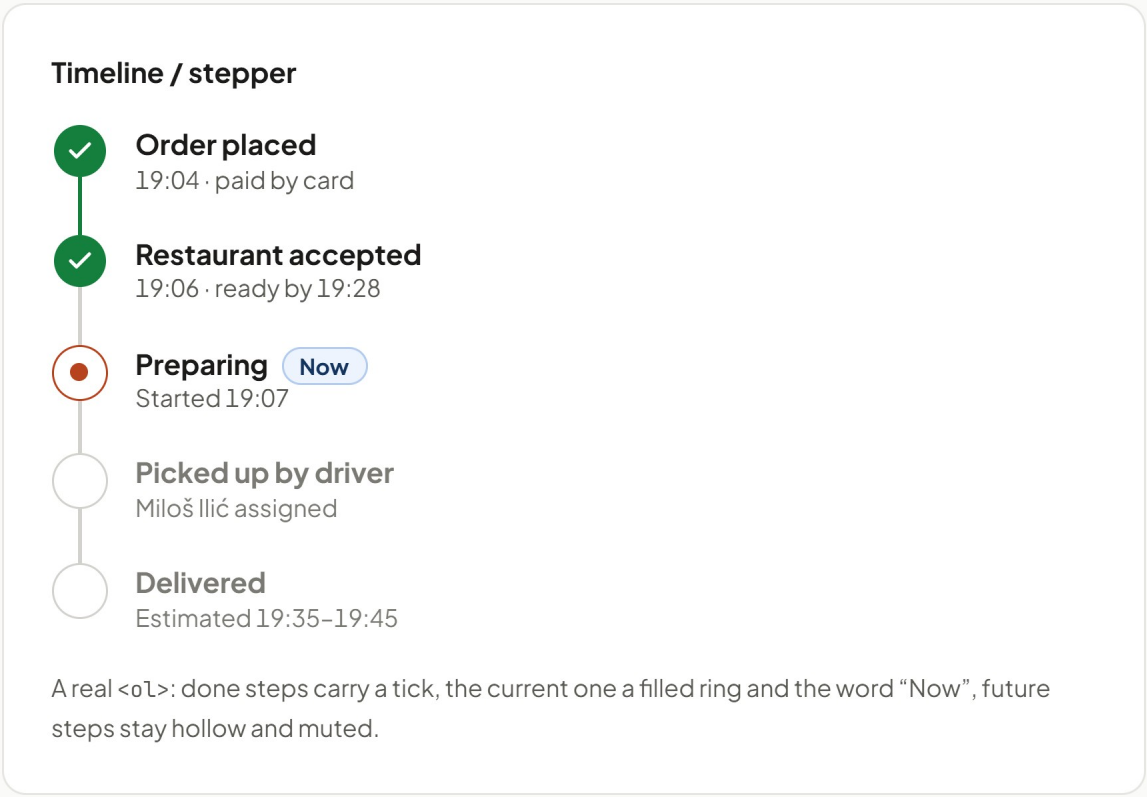

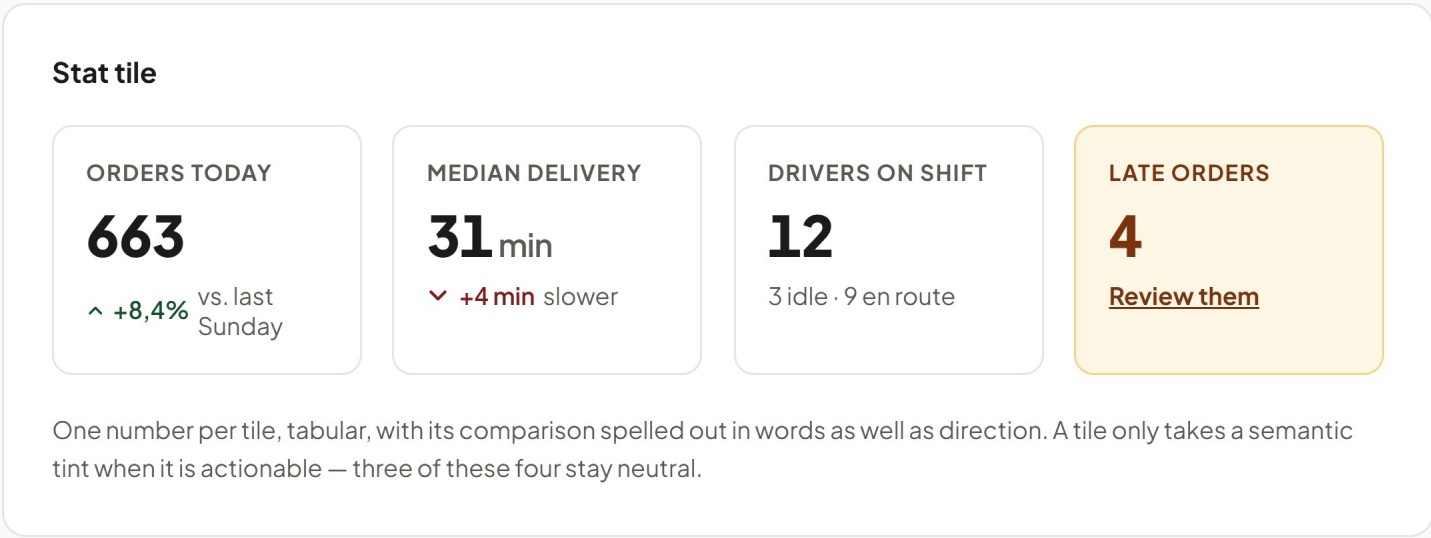

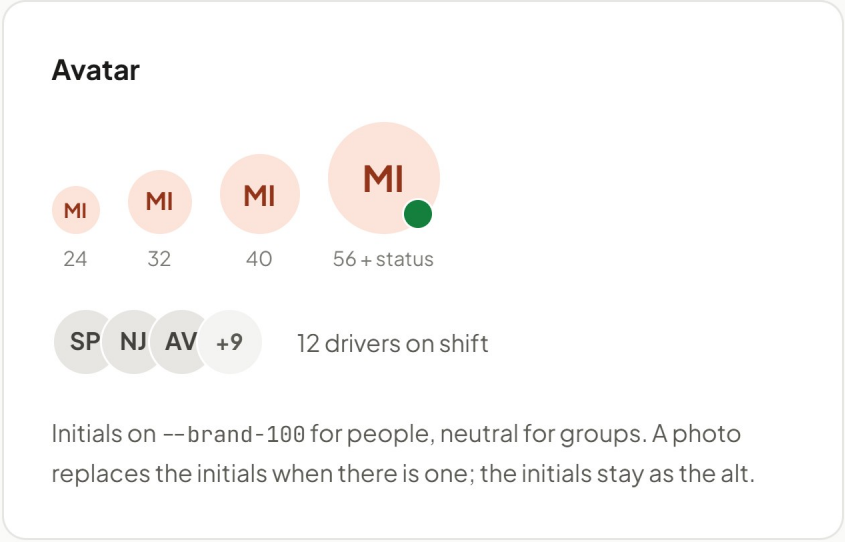

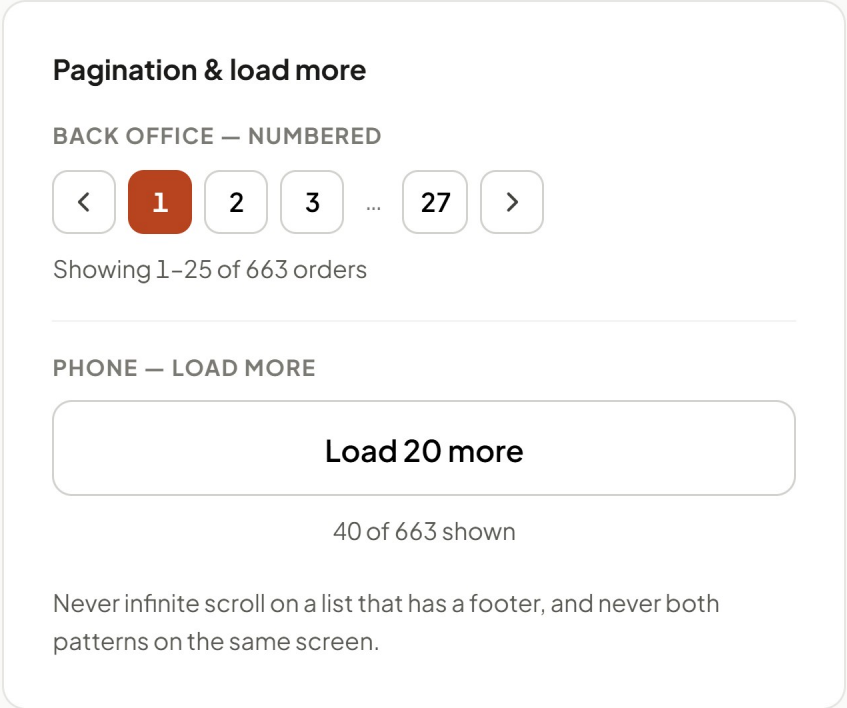

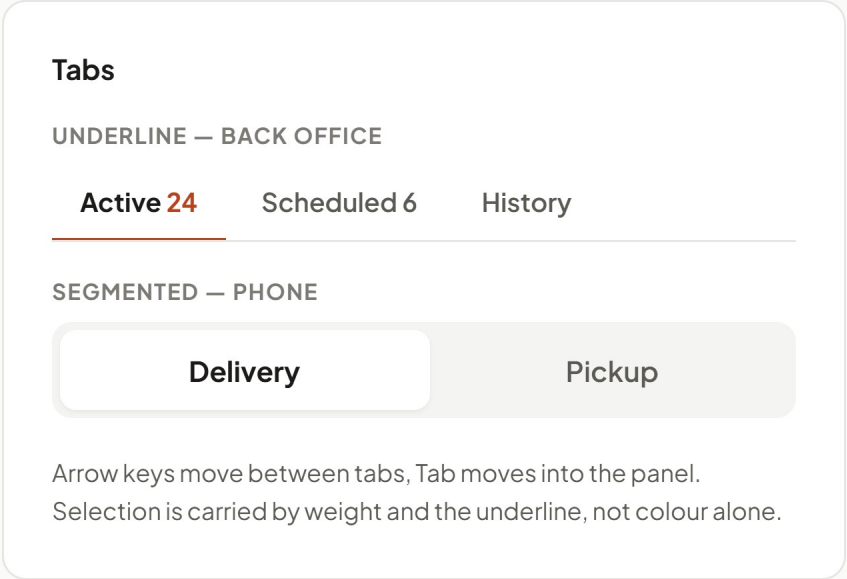

Focus is trapped and returns to the trigger on close; Escape closes; the scrim sits at `--z-overlay`, the dialog at `--z-modal`. The destructive verb is on the button, never just "OK".

Bottom sheet — the mobile equivalent

Same dialog semantics, presented from the bottom edge so both buttons land in the thumb zone. Drag handle is decorative; the sheet also closes on scrim tap and Escape.

Feedback

Four ways the app talks back: a toast for something that just happened, a spinner for a wait under a second, a skeleton for a wait the user can see the shape of, and a full-surface state when there is nothing or something broke. Never a spinner where a skeleton fits.

Toasts — desktop stack, bottom right

Account

On a phone the toast sits above the bottom nav, never over it, full width minus 12 px, with one optional inline action.

Spinner

16 inline

24 button

36 panel

Charging card...
Blocking waits always say what they are waiting for.

720 ms per turn, a 270° arc in --accent. Only for waits with no known shape — a payment, a submit. Under 300 ms nothing is shown at all, so a fast response does not flash.

Skeletons — shaped like the content that replaces them

Each skeleton matches the real block's box: same heights, same gaps, same number of lines. Text lines vary in width so the page does not read as a barcode. Pulse is opacity 1 → 0.45 over 1600 ms, never a sweeping gradient.

TABLE ROW — COMPACT

ORDER	RESTAURANT	STATUS	TOTAL

Exactly as many skeleton rows as the page size, so the table does not grow when data lands. The wrapper carries `aria-busy="true"`; the bars themselves are `aria-hidden`.

Empty state

No orders yet today
Orders appear here the moment a customer pays. The kitchen display refreshes on its own — nothing to do.

View yesterday

Icon, one sentence of what this place is for, and an action only when there is a genuinely useful one. Never an illustration that says nothing, never an exclamation mark.

Error state with retry

Could not load orders
The dispatch service did not respond. Your data is safe — nothing was lost. This usually clears within a minute.

RetryReport a problem

trace 4f21-c8a0 · 19:11:43

Says what failed, what it means for the user's data, and offers the retry as the primary action. The trace id is copyable so support can find it — no stack traces on screen.

Motion & accessibility

The whole motion inventory is four transitions. Anything not on this list does not animate — no page transitions, no hover lifts, no parallax. Every entry has a `prefers-reduced-motion` fallback that keeps the information and drops the movement.

TRANSITION	DURATION	EASING	WHAT MOVES	REDUCED-MOTION FALLBACK
Status change	160ms	<code>cubic-bezier(0,0,.2,1)</code> ease-out	A badge crossfades to the new label and rises 2px. The row it sits in never reflows — badge width is set by its longest label.	Instant swap, no fade, no rise. The new label is what carries the change anyway.
Toast entry	220ms in 160ms out	<code>cubic-bezier(.22,1,.36,1)</code> out: ease-in	Slides 12px from the edge it is docked to and fades in. Stack members shift with the same curve when one leaves.	Fade only, 100ms, no slide and no stack shuffle. Dismiss timers are unchanged.
Driver marker	900ms	linear matches the ping interval	Tweens between GPS pings so the map reads as a continuous stream of movement.	The marker jumps to each new fix. The ETA is updated but not animated.

```
/* durations and curves are tokens too */
:root {
  --dur-status: 160ms;
  --dur-toast-in: 220ms;
  --dur-toast-out: 160ms;
  --dur-marker: 900ms;
  --dur-pulse: 1600ms;
  --ease-out:    cubic-bezier(0, 0, .2, 1);
  --ease-spring: cubic-bezier(.22, 1, .36, 1);
}

/* one global opt-out, not a per-component check */
@media (prefers-reduced-motion: reduce) {
  *, *::before, *::after {
    animation-duration: 1ms !important;
    animation-iteration-count: 1 !important;
    transition-duration: 1ms !important;
    scroll-behavior: auto !important;
  }
  .skeleton { animation: none !important; opacity: .7; }
  .spinner  { animation-duration: 2000ms !important; }
  .marker   { transition: none !important; }
}
```

Status is never colour alone

Every badge carries an icon and a word. The colour is the third signal, not the first — the same row read in greyscale still tells a colour-blind dispatcher which orders need attention.

IN COLOUR

THE SAME, DESATURATED

Icons are stroked, 13px, currentColor, and aria-hidden — the word beside them is what a screen reader announces. A status change also fires a polite live-region update.

WCAG AA contrast — checked pairs — 4.5:1 for text, 3:1 from 24px and for UI borders

LIGHT		
PAIR	RATIO	AA
--text-on --surface	17,21	PASS
--text-muted-on --surface	6,89	PASS
--accent-on-on --accent	5,44	PASS
white-on --danger	5,72	PASS
--accent-link-on --bg-base	5,21	PASS
--success-text-on --success-subtle	8,64	PASS
--warning-text-on --warning-subtle	8,51	PASS
--danger-text-on --danger-subtle	9,04	PASS
--info-text-on --info-subtle	11,15	PASS
--text-subtle(n-500) on --surface	4,29	FAIL

n-500 is the one rejected pair: it is a decorative and disabled-state colour only. Body and caption text use --text-muted(n-600) at 6,89.

DARK		
PAIR	RATIO	AA
--text-on --surface	15,63	PASS
--text-on --bg-base	17,13	PASS
--text-muted-on --surface	7,08	PASS
--accent-on-on --accent	6,29	PASS
--accent-link-on --surface	6,06	PASS
--danger-text-on --danger-subtle	9,98	PASS
--success-text-on --success-subtle	11,15	PASS
--warning-text-on --warning-subtle	11,56	PASS
--info-text-on --info-subtle	10,23	PASS

Dark is why --accent moves to brand-400 and the semantics to their light tints: brand-600 on near-black reaches only 2,9:1. Button text on those fills is --accent-on, a near-black derived from the hue, not pure white.

Keyboard

Every interactive thing is a real control, so Tab order is DOM order. Dialogs and sheets trap focus and return it to the trigger. The back-office table supports arrow-key row movement with a roving tabIndex, and a “Skip to orders” link is the first focusable element on every screen.

Announcements

One polite live region per screen for status changes and toasts; role="alert" only for errors the user must act on. A countdown is **not** announced every second — it updates silently and announces at the 5 and 1 minute marks.

Targets & zoom

44×44px minimum on customer and driver screens, 8px between neighbours. Layouts hold at 200% browser zoom and at the largest OS text size without clipping — which is why no fixed-height row carries two lines of text.
